

NextGen[®] Enterprise Practice Management System

Key Differentiators

NextGen 5.0 – A Truly Integrated Practice Management and EMR System

- NextGen EPM easily integrates with the NextGen EMR, improving administrative efficiency
- Saves time and revenue with single maintenance and one set of user permissions for both systems
- Eliminates EMR/PM interface, which reduces cost of maintenance, possibility of error and ongoing support
- Integrated system means simplified implementation, installation, training, upgrades and maintenance

NextGen Advisor

- Single screen for each user with e-mail, tasks and other administrative data by assigned permissions
- Provides authorized users with a snapshot of daily operations, such as outstanding A/R and overdue tasks

NextGen Enterprise Appointment Scheduler

- Reduces costs by supporting centralized scheduling across multiple practices
- Customizable master appointment schedule templates with unlimited resources

Integrated Insurance Card Scanning

- Scans and stores insurance cards directly within the patient record—and retrieves from any practice
- Eliminates time spent photocopying cards and placing in patient chart

Multiple Master Patient Indexes

- Multiple MPIs can be defined and operate on a single database
- Eliminates redundant data entry and allows for data sharing/data isolation across multiple enterprises
- Keeps costs at a minimum with single installation and table maintenance for all MPIs

MMIC Technology Solutions is a reseller of the NextGen EPM. The number of key functions the NextGen EPM offers is what makes this system stand out from other vendors.

NextGen WorkLog Manager

- Advises your staff on what to do, when to do it and how to do it
- Automates, controls, enforces and analyzes your business policies and operations
- Assigns and manages tasks while analyzing staff productivity metrics
- Automated task management integrated throughout entire system (not just collections)
- Auto-completes tasks—task management systems without this only create more work
- No other vendor offers a more robust task management system than NextGen WorkLog Manager

NextGen Ad-Hoc Report Writer

- Built-in ad-hoc reporting across the entire enterprise and all practices
- Easy-to-use and features capability to drill-down to patient account
- Enables users to easily customize reports and memorize for future use

HIPAA Compliant Electronic Claims Submission

- Features a HIPAA compliant 837 electronic claim file format for generating native 837 claims
- Allows direct claims submission to any payer that accepts the ANSI X12 data standard
- Supports 837 COB secondary claim—eliminating need to pull EOB and attach to a paper secondary claim

Enterprise and Practice Preferences

- Provides flexibility to allow unique policies and workflow at each practice
- Allows an organization to enforce enterprise-wide policies and workflow when necessary

NextGen Autoflow

- Walks your staff through the steps to complete customizable practice check-out process
- Built on the familiarity of Windows Help and reduces costs and time associated with training and “go-live”
- Reduces learning curve and assists with training of new staff

True Enterprise Architecture

- Built on open technology and a single database for unlimited scalability and interoperability
- Allows for upgrades at enterprise level to populate through multiple practices
- Allows for interfaces at enterprise level to be accessed through multiple practices
- Enables enterprise level processing of claims, reports, statements, collections, etc
- Shared libraries of contracts and pricing master across all practices in enterprise
