Simply advancing patient care

Timely, accurate diagnoses reduce unnecessary treatments and admissions, improving overall patient outcomes. We make clinicians more efficient. They reduce costs and increase patient satisfaction.

**Seeing variants solves challenging diagnoses**
With tens of thousands of images, VisualDx shows you the variation in disease so you can solve challenging patient presentations of which you’re uncertain.

**The only tool to visualize drug reactions**
VisualDx is the only tool where you can search medications and get a differential diagnosis of drug-induced diseases represented by high-quality medical images.

**Increased accuracy improves patient outcomes**
Studies show VisualDx significantly increases diagnostic accuracy. In the 2013 Best in KLAS Awards report, clinicians attributed a higher positive impact on outcomes to VisualDx than to other tools.

**Seamless integration delivers immediate answers**
Whether it’s the patient problem list in the e-record or an UpToDate search, VisualDx is where clinicians need it, and it satisfies the Stage 2 Meaningful Use Core Objectives for Clinical Decision Support.

**Shared decision-making improves patient satisfaction**
Sharing images and disease information with patients helps them better understand their condition and builds confidence in the diagnosis, thereby strengthening the patient-clinician relationship.
Used In 1,500 Institutions and Over 50 percent of U.S. Medical Schools

Serious infectious, genetic, immunologic, nutritional, and metabolic diseases often present visually. Visual recognition is a powerful tool that helps clinicians make confident, accurate diagnoses.

VisualDx covers common and rare conditions across dermatology, infectious disease, oncology, child abuse recognition, travel medicine, drug reactions and more. With tens of thousands of medical images, seeing is knowing.

"VisualDx provides access to a wealth of visuals representing the variation in disease presentation you simply cannot find in any other point-of-care resource. Seeing the look of relief in a mother's eyes after showing her pictures of her child's recurrent rash that had eluded diagnosis was all I needed to realize that this was a clinical tool I could not be without."

Tad Jacobs, DO, Chief Medical Officer, Avera Medical Group

**Time is valuable**

In 2013, we surveyed our users and examined our server data to see how much time VisualDx saved clinicians. Here’s what we found:

- MDs saved **14** minutes per day
- PAs saved **19** minutes per day
- NPs saved **26** minutes per day

**For three years, the Best in KLAS Awards Software & Services Report has recognized VisualDx as a Category Leader in Clinical Decision Support.**
